

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 9, line 24 with the following rewritten paragraph:

In an exact way, the object of the present invention is a receiver for CDMA system, intended to receive signals corresponding to streams of spread spectrum information symbols ~~in~~ by pseudorandom binary sequences, this receiver including K processing channels and being characterised in that at least one of these channels includes a filter adapted to one of the pseudorandom sequences having been used for information symbols spectrum spreading and a symbol timing clock signal recovery circuit, the other channels each including a sliding correlator working with one of the other sequences having been used for information symbols spectrum spreading, each sliding correlator being controlled by a symbol clock signal, which is the clock signal produced by the channel using the adapted filter.
